

Nutritional Statement

Natural Enrichment Industries produces Food Grade Tricalcium Phosphate using high purity calcium hydroxide and food-grade phosphoric acid.

The final product by mass has a typical calcium content of 38% and a typical phosphate (PO_4) content of 56%.

Magnesium and other alkali salts will have typical values of less than 1% by mass.

All other minerals are at trace levels.

The material contains no vitamin, fat, protein, or other organic components.
