Expiration Dates

Natural Enrichment Industries has determined that tricalcium phosphate has an expiration date of two years when stored in a cool, dry environment free of rodents, insects, and birds. Tricalcium phosphate is the most stable form of calcium phosphate. It is non-flammable, and no breakdown products occur over time. Limitation of its shelf life is a function of packaging/storage conditions rather than chemical breakdown.

The above statement proposed this date, March 8, 2006, covers all the tricalcium phosphate produced by NEI, including the following:

- Specification 01
- Specification 02
- Specification 03
- Specification 04
- Specification 05
- Specification 06
- Specification 07
- Specification 08
- All custom tricalcium phosphate
- Tricalcium phosphate samples

Hitherto the shelf life has not appeared on the Certificate of Analysis, but henceforth shall be.

David Dawson,
Quality Control Manager
Natural Enrichment Industries
